

Reflection

Task – 2

As a first-year B.Tech student in HEALTH INFORMATICS BRANCH, this activity helped me understand the importance of building a strong digital presence early in my academic journey. I have created profiles on KAGGLE, GITHUB and LINKEDIN which are widely used platforms for showcasing skills, learning, and networking. While creating and updating these profiles, I realized that simply having an account is not enough. It is important to keep them active and meaningful. On LinkedIn, I have started adding some content to reflect my interests and learning progress. On Kaggle, I have explored datasets and begun engaging with the platform to improve my analytical skills. GitHub has helped me understand how to organize and present my work in a professional way. This experience made me more aware of how my online identity represents me. It also taught me that consistency, honesty, and continuous learning are important while building these profiles. As I continue my B.Tech journey, I plan to regularly update my work, improve my skills, and use these platforms effectively for my growth in the field of HEALTH INFORMATICS.
